

# GRILLES AND REGISTERS

## PERFORATED AIR GRILLES AND REGISTERS

- The perforated air grille is a wall mounted air terminal device that is composed of perforated sheet fixed of a frame.
- The perforated sheet is made of heavy gauge steel.
- The frame is made of extruded aluminium bars.
- Perforated face has (3/16) inch diameter holes on (1/4) inch staggered centers.
- The perforated air grilles are used in cooling, heating and air ventilation. They are usually used as return grilles.
- Insulating gasket is fixed around the back of the frame to prevent infiltration between the frame the wall
