

# GRILLES AND REGISTERS

## FRESH AIR GRILLE

- The fresh air grille is a simple form of filter grille. It is composed of a single deflection grille with an aluminium filter fixed at the back.
  - The fresh air grilles are used to supply fresh clean air to the air handling units.
  - The filter is made from washable aluminium media and is fixed on the back of the grille.
  - Insulating gasket is fixed around the back of the frame to prevent infiltration between the frame and the wall.
  - The front horizontal blades are adjustable.
- Available types of finishings:
- Natural anodized aluminium finish.
  - Powder coated (painted to RAL codes)
