

SINGLE DEFLECTION AIR GRILLES AND REGISTERS

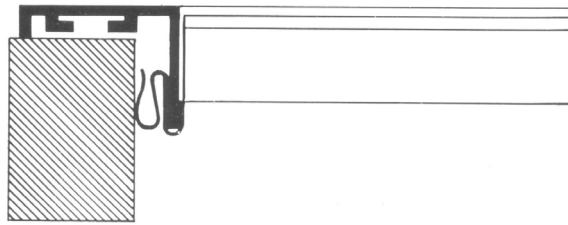

- The single deflection air grille is composed of a set of deflecting blades mounted on a rectangular shaped frame.
- The blades are mounted either horizontally or vertically.
- The single deflection air grilles are wall mounted air terminal devices manufactured from extruded aluminum bars. Carefully designed to meet the demand for high quality and reliability.
- The single deflection grilles are used in cooling, heating or air ventilation.
- Insulating gasket is fixed around the back of the frame to prevent infiltration between the frame and the wall.
- Available with easily removable opposed blades damper, attached to the frame by means of (S) clips to ensure tight attachment and maximum flexibility. The damper is made of extruded aluminum/ GI bars and opening of the damper is easily adjusted by means of control lever that is driven by a screw driver from the front face of the register.

Available types of finishing:

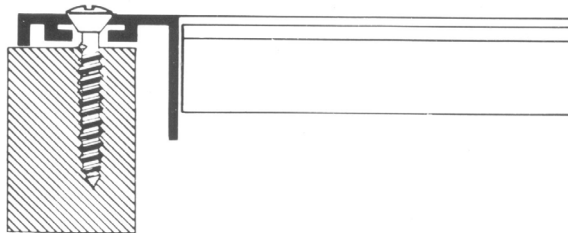

- Natural anodized aluminum finish
- Powder coated (painted to RAL codes)

Types of Fixing:

1) Concealed type fixing (wall only)

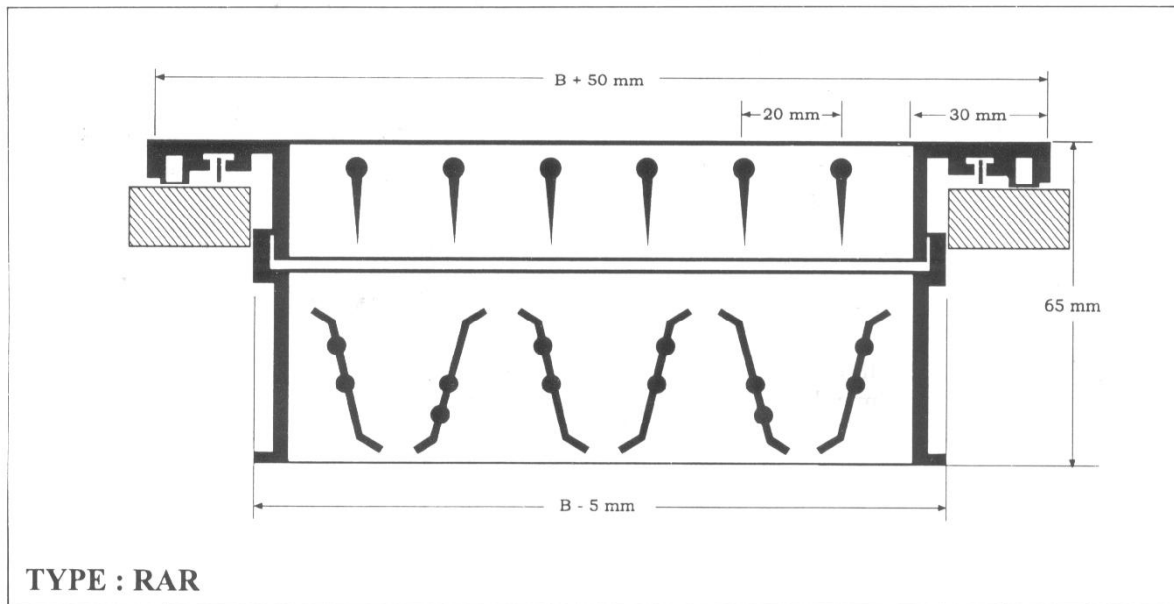

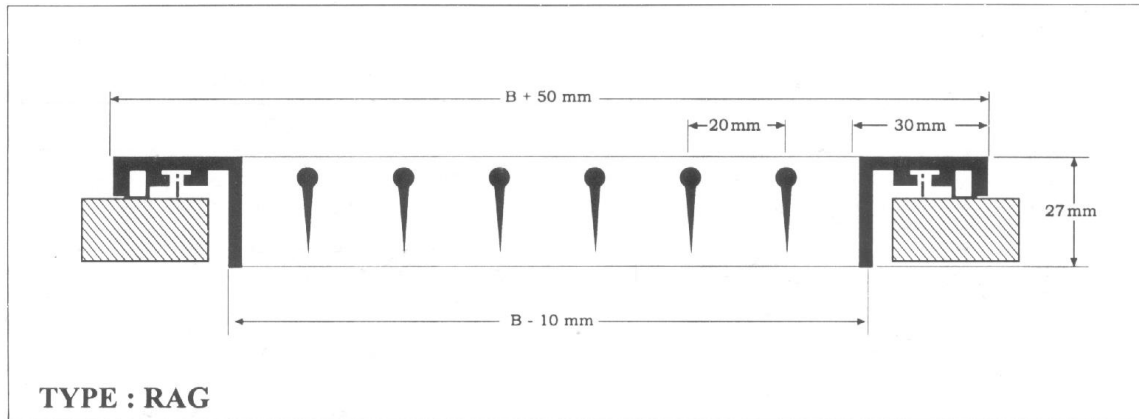

2) Visible screw fixing
